

HOW CAN WE GROW?

Organizations of every size and sector ponder this question every day. For some, the answer may lie in a new or expanded facility. For others, the solution may be new engineering processes designed to fuel a growing supply chain.

Haskell provides fully integrated facility solutions that ensure the effective execution of capital projects across multiple markets. Our leadership in design-build, construction management and EPC delivery methods has led to the successful completion of thousands of projects worldwide.

It's a proven process
that can help you grow.

Here's how.

MASTER PLANNING

Building for Growth

Haskell's vision for St. John Broken Arrow Medical Campus was a 68-acre master plan incorporating expandable facilities — a full service, 189,000-square-foot, six-story community hospital and 110,000-square-foot medical office building — atop a fully implemented site-wide infrastructure.

Our integrated design-build process made the complex design more affordable and brought the facility online 25 percent faster than traditional construction methods. St. John Broken Arrow Medical Campus realized a savings they could dedicate to their ultimate mission: patient care.

ARCHITECTURE

Sparking Imagination

Haskell's solution for GE Aviation is a learning center that inspires employees, customers and visitors at every angle, inside and out. Haskell's welcoming two-story, 45,000-square-foot architectural design transcended specification. We delivered a unique corporate facility that blends highly functional conference rooms and a 400-seat auditorium with majestic museum-like displays of historic and modern aircraft engines suspended from the ceiling trusses.

ENGINEERING

Accommodating Mass in Manufacturing

Haskell's structural solution for Spirit AeroSystems' 315-acre, 625,200-square-foot industrial LEED® Silver Certified facility created a manufacturing facility as innovative as Spirit's process for creating structural composite aircraft components.

Even with major machine tools and structural unknowns, including how to accommodate the world's third largest autoclave still under development at the project start, Haskell worked alongside Spirit AeroSystems to manage the massive facility project, ultimately bringing the project in under budget and on schedule. Now Spirit AeroSystems has a ground-breaking facility that's worthy of showcasing their innovative ribbon composite fiber technology to the aircraft industry.

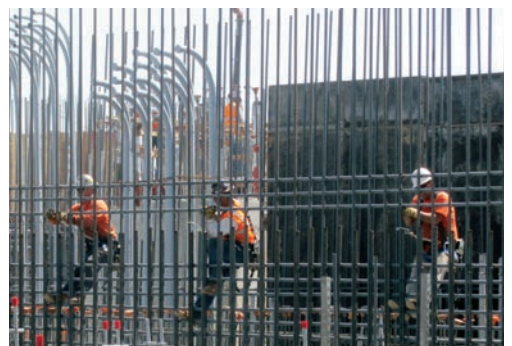

CONSTRUCTION

Protecting a Historic Watershed

When the Navy turned to Haskell to upgrade the Indian Head Wastewater Treatment Plant the risks were tremendous. The plant was pivotal to a watershed spanning six states and 64,000 square miles. Not only that, the plant had to maintain operations and remain permit compliant during construction.

The LEED® Silver Certified expansion was delivered via design-build within 24 months, achieving all of the project's budget and schedule requirements despite interruption from three natural disasters: an earthquake, hurricane and 100-year flood. The upgrade has since removed thousands of pounds of nitrogen and phosphorous that would have flowed to the Chesapeake Bay.

SYSTEMS INTEGRATION

Delivering Top-Shelf Efficiency

Haskell's Engineer, Procure, Construct (EPC) delivery offered clear benefits for Diageo, the world's largest producer of premium adult beverages. In upgrading its North American supply chain system — spanning two large-scale manufacturing facilities — Diageo wanted more than a supplier for its \$160 million investment. The company wanted a partner who could provide crystal clear coordination, fast delivery, high quality and fiscal stewardship.

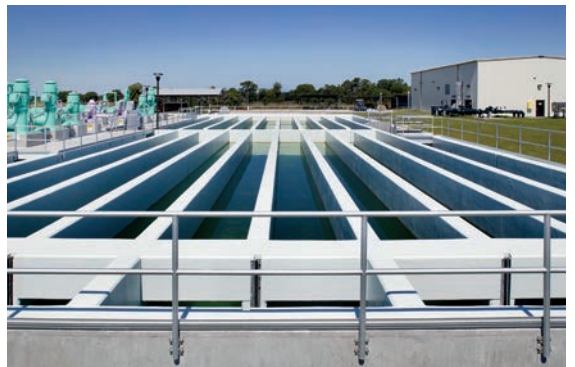

In addition to traditional engineering and construction resources, dedicated Haskell teams managed contract negotiations, procured major equipment centers, provided open-book accounting and leveraged joint purchasing, program-wide. Diageo was thrilled to gain world-class manufacturing efficiency in record time despite winter conditions, hazardous work areas, 24-hour production environments and ongoing design changes.

OPERATIONS AND MANAGEMENT

Optimizing Use and Functionality

When construction ended on Paradise Valley Estates, a continuing care retirement community for military officers, the detailed work of day-to-day operations had only begun. Paradise Valley Estates chose our senior living specialists to ensure ongoing operations and management kept pace with resident expectations and fulfilled the scope of the community's master plan.

We have proven to be a long-term marketing and facility management partner for the sought-after Paradise Valley Estates community. Our work in areas such as senior living, municipal and industrial facilities makes us a natural partner to manage ongoing equipment installation and commissioning, facility maintenance and management services.

HOW WILL YOU GROW?

If your organization is navigating growth, a partnership with Haskell can generate significant advantages. We're one of the world's leading integrated design-build firms practicing in the industrial, commercial, government and civil infrastructure markets, with a 45+ year history of delivering the right solution for every client. That's why we're the first choice among public organizations and market leaders including Boeing, Baptist Health System, ConAgra Foods, Frito-Lay, General Dynamics, Mayo Clinic, PepsiCo, Rolls-Royce and the U.S. Military.

Our hallmark is in providing clients with a collaborative experience that results in certainty of outcome for every project. Thanks to our successful work in diverse markets, we've come to enjoy a number of industry accolades:

#1 GREEN INDUSTRIAL AND MANUFACTURING DESIGN FIRM AND CONTRACTOR

- *Engineering News Record*

#1 TOP DESIGN-BUILD CONTRACTOR

- *Modern Healthcare*

#1 AEROSPACE CONTRACTOR

- *Engineering News Record*

#2 TOP DESIGN-BUILD FIRM

- *Engineering News Record Southeast*

#3 FOOD PROCESSING CONTRACTOR

- *Engineering News Record*

#24 TOP DESIGN-BUILD FIRM

- *Engineering News Record*

We're here with facility solutions to move your enterprise forward. We're here with a scope of services that will bring your project to bear successfully and with less risk.

We're here to help you grow.
